

# Ad unit guidelines for Lääkäriportaali mainsponsorship

## Mainsponsorship

Your brand is shown for the whole year online through five different ad placements. As primary partner your message is on the front page of the service exclusively.

Additional elements to banner visibility: mainsponsor has direct mail to their target group once every 6 months. Lääkäriportaali makes a yearly specialty-based inquiry to target group. Mainsponsor has access to the results at will. Lääkäriportaali's inquiry is a structured inquiry with closed responses.

### Lääkäriportaali website

Ad formats (see pages 2–3)	Ad size (px)	Max. fileweight (kb)	Ad format	Visibility
1 Giant Panorama	980 x 400 px	200 kb	jpg, HTML5 or gif	Lääkäriportaali's desktop view, front page continuously, inner pages varying with other possible advertisers on page load, excl. specific sections e.g. content marketing articles and educational section.
2 Medium Rectangle	300 x 250 px	80 kb	jpg, HTML5 or gif	Lääkäriportaali's front and inner pages continuous visibility in mobile view, excl. specific sections e.g. content marketing articles and educational section. Visibility also in Lääkäriportaali's front page (desktop view) continuously.
3 Standard Rectangle	600 x 250 px	100 kb	jpg, HTML5 or gif	Lääkäriportaali's front and inner pages continuous visibility in desktop view.

### Lääkäriportaali newsletter

Ad formats (see page 3)	Ad size (px)	Max. fileweight (kb)	Ad format	Visibility
3 Standard Rectangle	600 x 250 px	100 kb	jpg	Lääkäriportaali newsletters, continuous visibility.

## Material delivery

**Schedule:** five (5) working days prior to campaign start to [mainos@tervemedia.fi](mailto:mainos@tervemedia.fi). If the materials are delivered late it may affect the campaign duration.

**Please include:**

- name of advertiser and campaign
- publish date
- url/landing page
- speciality in which the banners are displayed
- possible targetings
- if the campaign has several materials, please state the order or delivery% they're displayed

## Material information

The banners can include only one link. HTML5 banners can have multiple links coded straight into the banner.

**HTML5-Banners**

- please see pages 6–7

**Video banners**

- format: mp4, max. size 20 mb

Any questions?

Please contact our ad team at [mainos@tervemedia.fi](mailto:mainos@tervemedia.fi)

## Ad unit guidelines for Lääkäriportaali mainsponsorship

### Ad formats, Desktop, Front page

- 1 Giant Panorama,  
980 x 400 px, 200 kb
- 2 Medium Rectangle,  
300 x 250 px, 80 kb
- 3 Standard Rectangle,  
600 x 250 px, 100 kb

### Ad formats, Desktop, Inner page

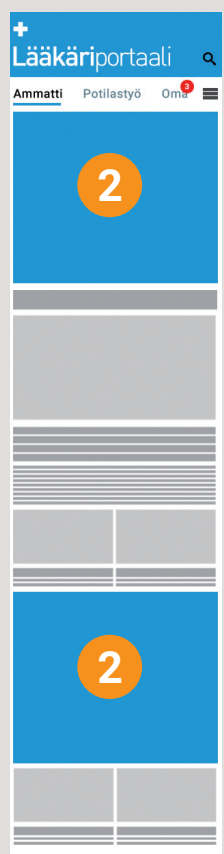

- 1 Giant Panorama,  
980 x 400 px, 200 kb
- 3 Standard Rectangle,  
600 x 250 px, 100 kb

# Ad unit guidelines for Lääkäriportaali mainsponsorship

**Ad formats, Mobile**

2 Medium Rectangle,  
one of the shown slots  
300 x 250 px, 80 kb

The image shows a mobile app interface for Lääkäriportaali. At the top, there is a search bar and navigation tabs for 'Ammatti', 'Potilastyö', and 'Oma'. Below the navigation, there are two large blue rectangular ad slots, each containing a white circle with the number '2'. The rest of the screen is filled with various grey rectangular placeholders representing different content blocks.

**Ad formats, Newsletter**

3 Standard Rectangle,  
600 x 250 px, 100 kb

The image shows a newsletter layout. At the top, there is a header with the Lääkäriportaali logo and the text 'YLEISLÄÄKETIEDE Viikkokirje'. Below the header, there are several horizontal lines representing text. In the bottom right corner, there is a large blue rectangular ad slot containing a white circle with the number '3'. Other grey rectangular placeholders represent various content blocks.

## Direct e-mail

### Direct e-mail consists of the following

Topic

Preheader (optional)

Image (560 x 315 px)

Content

Logos or other material (optional)

## HTML5 banners in Smart Ad Server

### Technical specifications

#### File size:

All files included the html5 creative does affect to the creative size (images, scripts, fonts and CSS-files). The lower the file size is, the creative and the website where the creative is shown, will be loading faster.

#### Initial load:

Use only files which the creative needs to keep initial loading as low as possible.

- Optimize the images and postpone the loading of all heavier files
- let the file loading start by user activation (e.g. mouse over or click)

#### Structure:

Html5-file should include one index.html-file. Folder structure is supported, where CSS-files and images are in located their own folders or all the files can be in the same in folder.

#### General:

- html5 creatives must be SSL compatible (https).
- Character set is UTF-8 as default.
- html5 creative should in a be zip-file (rar-format is not supported).
- Links should open in a new window (*target="\_blank"*)
- Using jQuery is not recommended in the html5 advertising.
- Size of the creative should be defined in a meta-tag information in order to make sure, that the creative is displaying in right size: `<meta name="ad.size" content="width=[x],height=[y]">`

### How to define clickTAG on a html-script:

Smart follows IAB recommandations regarding clicks counting for HTML5 creatives. Adserver must be able to identify the click destination so creative must use the javascript "**clickTag**" variable(s) in the index.html file.

#### How to set up one clickTag in the html

```
var clickTag = "url of the click";
```

## How to set up multiple clickTags in the html

```
var clickTag0 = "first click url";  
var clickTag1 = "second click url";  
var clickTag2 = "third click url";
```

Then creative has to use either of these two variables in html:

### first example:

```
<a id="clickArea"></a>  
  
<script type="text/javascript">  
var clickArea = document.getElementById("clickArea");  
clickArea.onclick = function(){  
window.open(clickTag, "blank");  
}  
</script>
```

### second example:

```
<a id="clickArea" target="_blank"></a>  
  
<script type="text/javascript">  
var clickArea = document.getElementById("clickArea");  
clickArea.href = clickTag;  
</script>
```

Clients has to add smart's javascript file in the <head></head> section, inside the HTML5 creative to provide the desired behavior:

```
<script src="//ns.sascdn.com/diff/templates/js/banner/sas-clicktag-3.1.js"></script>
```

### Thing to notice

If creative is using clickTag like in second example (var clickArea = document.getElementById("clickArea"); clickArea.href = clickTag;) this is necessary to wait for the clicktag library initialization. It means that the smart javascript library must first replace javascript clicktag variables by smart click counter and then ad can be rendered.

### How the ad will know when initialization is completed?

Just register the "init" function - it will callback when clicktag library finish task, e.g.:

```
<script>  
function init(){  
  /* this is a customer function which start building the ad */  
}  
  
sas.clicktag.register(function(){  
  init();  
});  
</script>
```
